

REVO™

REVO™ Dieboards are the world's first recycled rotary dieboards, developed to offer diemakers and converters an environmentally friendly alternative to hardwood plywood.

REVO™ rotary dies are durable & dimensionally stable – similar to plywood but made from recycled paper, saving precious hardwood trees and protecting the environment.

Much of the rotary tooling used in the packaging industry today is short-run, throw-away disposable tooling. By choosing REVO™ instead of plywood, corrugated converters are now saving trees and making a significant environmentally-responsible impact on our industry.

REVO BENEFITS

- The world's first recycled dieboard for steel-rule rotary cutting dies.
- Saves trees & protects the environment by using recycled paper
- Ideal for a wide range of press runs.
- Cost-effective and durable.
- A lifecycle of up to 100,000 impressions.
- Dimensional stability similar to plywood dieboards.
