

UV Stabilized Birch™

This **UV Stabilized Birch Dieboard** is imported from select mills with the Ultraviolet coating applied at our state-of-the-art facility here in the USA.

This dieboard is finished with two coats of UV Polymer, with each coat UV-cured and precision sanded. This provides a flat, stable cutting die with a completely sealed, hard and smooth finish.

Independent lab testing confirms the UV Stabilized Birch absorbs 47.71% less moisture than an uncoated maple dieboard.
