NEW Airtac 2 Improved

What's NEW?

Airtac 2 Improved is a mist spray rubber adhesive designed for temporary bonds. Airtac 2 Improved can be used on materials needing extra tack for placement on vertical or difficult surface areas. This product is ideally suited for tool shop applications such as temporary placement of details and pattern fabrication. Airtac 2 Improved meets many of the low VOC state restrictions for aerosol products.

Note: The product will be available for sale to countries outside of Europe. For Europe, please ask for details on Airtac 2 LH.

Catalog Position: Resin Infusion Products

Benefits

- Excellent tack holds dry materials for faster vacuum bagging.
- More accurate material placement for infusion setups and better quality laminates.
- Less toxic for safer application.

How is it different than our existing product?

New, improved design meets many of the low VOC state restrictions and is environmental friendly.

Who uses this product?

Aerospace tooling, high performance automotive, wind energy, marine, and general composite manufacturers.
