- [Silicone Rubber Molds with Complex Parting Lines](#)
- [Building an Epoxy/Fiberglass Mold](#)
- [Vacuum Bagging a Carbon Fiber Part](#)

More videos are in development, so be sure to check back.

Tech Line Q&A

We feature technical questions in every issue, so don't miss the archives.

Still can't find the answer you're looking for? Our technical support staff is available during normal business hours, Monday through Friday, by calling (800) 321-8511 (option 5).

Q: What release product can serve as a barrier to help prevent the binders in sand from sticking to the urethane foundry tooling, core boxes, etc.?

A: To help prevent binders from building up on your tool and/or core boxes, we recommend [MPP2180 Mold Prep & Primer](#). Although it is not a release agent, it helps the sand release from the surface more easily.

Q: What type of clay should be used with silicone?

A: Use non-sulfur clay when working with silicone. Silicone will not set up against clay containing sulfur. Try some of our sulfur-free clays such as [Plast-Econ Modeling Clay](#) or [Chavant CM-50 Styling clay](#).

We offer multiple [Sample Kits](#) for a variety of products and applications.

Learn more or login to [Members Only](#) - our exclusive intranet for high-volume customers.

Read past issues and Q&A in the [archives](#).

Our [Close Out List](#) has great deals on hundreds of products.

Note: all Close Out items are subject to prior sale.

As always, our [website](#) features additional resources such as TDS, MSDS, and more for all of our products. Thank you for subscribing to our newsletter. We look forward to the next opportunity to service your material needs.

Sincerely,
